Power Alert

BSES discoms have always endeavored to provide stable and quality power supply in their area. The peak power demand in Delhi is growing at a rate of 6-8% annually. During the summers of 2015, Delhi's peak power demand is likely to cross 6200 MW.

As part of the overall preparation and to ensure reliable network operations during the ensuing summer months, BSES Rajdhani Power Limited (BRPL) and BSES Yamuna Power Limited (BYPL) have started undertaking planned shutdowns for carrying-out preventive maintenance and upgrading of the local network. This is a standard practice throughout the world.

“Like all machines, electricity infrastructure also needs periodic maintenance. In the case of Delhi, the need is compounded on account of the increasing power demand and an extreme climate, which takes a toll on the electricity infrastructure”, **said a BSES spokesperson.**

To minimise the inconvenience to our consumers, this activity is undertaken during the lean winter months. Since BSES has a huge area panning 950 sq. kms, this activity will continue till March 2015.

For the convenience of our consumers and to help them plan their day better, a division-wise schedule for planned maintenance has been put on BSES' website www.bsesdelhi.com.
